

PROJECT TITLE: PASSENGER & CREW MANGEMENT SYSTEM**TEAM MEMBERS: DEVARSHI WADNERKAR 17EC102****RAHUL THAKKAR 17EC094****AMARTYA SINGH 17EC088**

BRIEF: In this project we are going to develop a passenger & crew management system using C++.

ADMIN SIDE :

By using this software a crew member can get all the details regarding passenger general details, food order details, transportation details & feedback. A crew member can even get the information about other crew member & they can also add new crew members to their database.

CLIENT SIDE :

A passenger can provide their general details, order food from the menu provided, take transportation facility from the destination airport at the end they can even provide feedback to the airline service.

DIVISION OF WORK :***DEVARSHI WADNERKAR:***

He will be our client side developer.

AMARTYA SINGH:

He will be our admin side developer.

RAHUL THAKKAR:

He will be representative of our project & also test the program for it's user friendliness.

HIGHLIGHTS OF OUR PROJECT:

- A crew member will require to provide password to login then only he can see details of each and every member of its crew & passenger.
- Internal navigation is provided so a user will have easy access to the page where ever he wants to go.
- A user will always get retry option if he by mistakes choose incorrect option.
